

I do not see or understand the problem with XM Radio broadcasting the Weather and Traffic reports. At the present time XM is a small market. I do not see how it would effect the market. Why not share valuable information with the public as vital as Weather and Traffic is for the safety of the people. It's not like people listen to that broad cast on a constant basis. I would think it is only a spot check to see what is happening at that time. No one owns the Weather or what's happening with the Traffic, how can the NAB hold the control of something they do not own or can't control other than when it's broadcasted. With XM Radio it's on all the time and when I want to listen to it (at that time) I tune it in. I thank you for your time.

Sincerely

Gary G. thom
